Water’s chemical name is H_2O

The number of different pairs we can create given n cards is ${}^nC_2$

List items

- Water’s chemical name is H_2O
- The number of different pairs we can create given n cards is ${}^nC_2$. Will this break?
- H_2O

Table

Water’s chemical name is H_2O	Without sub or sup
Without sub or sup	The number of different pairs we can create given n cards is ${}^nC_2$. Will this break?

Mathematical Formula 1

$$(x+a)^n=\sum_{k=0}^{n}\binom{n}{k}x^k\,a^{n-k}$$

Mathematical Formula 2

$$\sin\alpha\pm\sin\beta=2\sin\frac{1}{2}(\alpha\pm\beta)\cos\frac{1}{2}(\alpha\mp\beta)$$

Mathematical Formula 3

β©±Ωα
